

Hybrid Secure Web Gateway: Double Down on Internet Security

Perimeter 81's Hybrid Secure Web Gateway ensures employees are always protected from web threats without sacrificing on network performance or leaving employees vulnerable to web-based attacks.

Typical deployments are either an on-prem appliance or cloud service, Perimeter 81's Hybrid SWG includes both on-device and cloud-based components. They work in concert to provide the highest level of Internet security for corporate users. Hybrid SWG can also work in device- or cloud-only modes, enabling full flexibility for organizations to meet their security needs.

Always Protected, No Compromises

Direct Cloud Access

No matter where employees connect from, be it the office, home, or anywhere in between, they are always protected. With Hybrid SWG, there's no need to backhaul traffic through an on-prem location.

Security, Everywhere

Since a Hybrid SWG can be in two places at once, employees are protected even when they are not connected to the corporate network. IT Managers can rest easy that corporate devices are being defended whether connecting to the company network, or not.

Protect Bypassed Traffic

Web bypass rules (split tunneling) are the go-to solution for reducing latency and increasing application performance. This can leave employees unprotected and vulnerable to attacks. Device-side Hybrid SWG means your people are protected even when performance needs supersede security requirements.

Secure SSL Inspection

SSL inspection happens on the device. No worries about decrypting private company data in an uncontrolled environment. With Hybrid SWG, SSL inspection is always local.

Granular Web Filtering

Perimeter 81's user-centric granular control extends to Web Filtering. Website access rules can be customized for different individuals or groups, and according to time of day. For example, social media sites can be blocked during work hours for all employees except for the social media management team. [Learn more.](#)

Apply All

Hybrid SWG's cloud-side component is an additional layer of protection for traffic passing through the corporate network. It enables admins to enforce consistent, network-wide policies that should apply to all users.

Get Strict At Work

Apply stricter policies for when users are "at work" (i.e. connected to the corporate network). For example, blocking access to social networks (e.g. Facebook) to improve productivity, or blocking access to gambling or hate websites to reduce the risk of employee misconduct and possible liability for the organization. It also enables public WiFi protection by encrypting all communication between the user device to the cloud SWG.

Differentiate by Network

Perimeter 81's Hybrid SWG is part of a converged network security platform that supports creating multiple, self-contained networks for a single company. For example, you could have one for the sales team, and another for other employees. These different networks can have separate filtering rules that suit the unique needs of each user base.

Malware Protection

Perimeter 81's Hybrid SWG ensures that legitimate web traffic isn't carrying illegitimate software. Whether an attack comes from third-party ads, trojans, or zero-day exploits, Malware Protection has you covered. [Learn more.](#)

Perimeter 81's Hybrid SWG Advantages

- Single-pane-of-glass management console for all SWG functions
- Get visibility into users' web activity with filtering events
- Category-based blocking (gambling, malicious sites, etc.) for both device- and cloud-side SWG
- Enable multi-network deployments each with unique SWG policies
- Protect user traffic, even when not connected to the corporate network
- No traffic decryption outside the user's device
- Secure and fast direct-to-internet connectivity
- Secure public Wi-Fi connections
- Flexible policy settings (e.g. "working hours")
- Flexible deployment models (device and/or cloud-side)
- No on-prem deployment, management or maintenance

About Perimeter 81

Perimeter 81 is a robust, yet easy-to-use, converged networking and network security platform which connects all users, in the office or remote, to all resources, located on-prem, or clouds. It is a cloud-native service that includes advanced capabilities such as Zero Trust remote access, Internet access control, malware protection and firewall as a service. It enables any business to build a secure corporate network over a private global backbone, without hardware and within minutes. The entire service is managed from a unified console and is backed by an award-winning global support team that has you covered 24/7.
